

# Lovable.dev: Idea to Prototype, Faster

*An AI Demonstration by Jeremy Gatens*

# ABCs of Modern Development

## Always Plan First

Define your idea outside Lovable (What it does, Who it's for). Use LLM to help create a clear Product Requirements Document

## Build in Bite-sized Tasks

Tell the AI exactly what you want to build in each step. Avoid vague instructions.

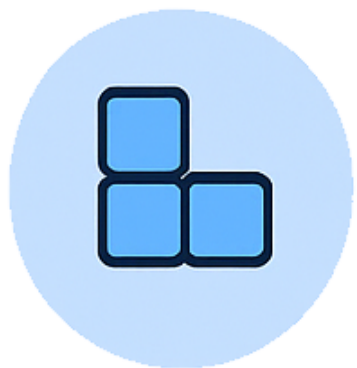

## Consider Prompt-Driven Development

Think in terms of Prompt-Driven Development.

*[lovable.dev](https://lovable.dev)*

# Prompt-Driven Development

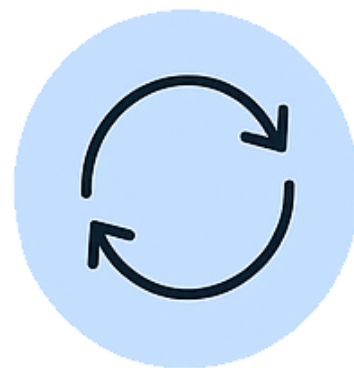

**Select a  
Task**

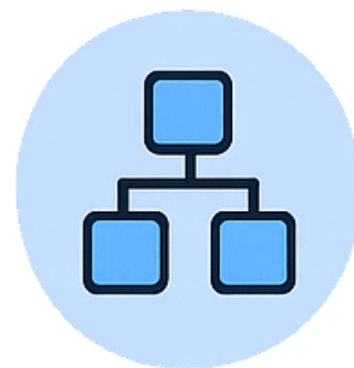

**Generate  
Output**

**Evaluate  
Results**

**Iterative  
Process**

**Optimize  
Solution**

# Navigating the Challenges

## Planned Approach

Rapid idea → prototype.  
Automate boring stuff.

## Greenfield Advantage

Best for new builds  
Classic tools for refactors.
